Welcome to a new and exciting international journal in the field of diagnostic imaging. The *Brazilian Journal of Diagnostic Imaging* (BJDI) is an open-access, peer-reviewed, on demand publication dedicated to Brazilian research, carried out in Brazil and anywhere in the world. The main fields of publication are radiology, nuclear medicine and dental and maxillofacial radiology.

I am glad to announce the first issue of what we hope will be a standing place for publishing diagnostic imaging research. The significance of this first issue is considerable and it is a pleasure to celebrate the publication with you.

Some goals of BJDl include rapid review of papers submitted and immediate publication of those approved. This journal is not favoring any discipline; it will be open to any researcher without discrimination. It is free of charge and we intent to keep it that way.

Authors are invited to submit papers, reflections, opinions, case reports, short communications, technical notes, meetings and conferences abstracts and commentaries. BJDl will facilitate collaboration on publications between students and researchers in developed and underdeveloped programs.
